

STADIUM TOUR

The map shows some of the stadiums being used in the 2026 FIFA World Cup.

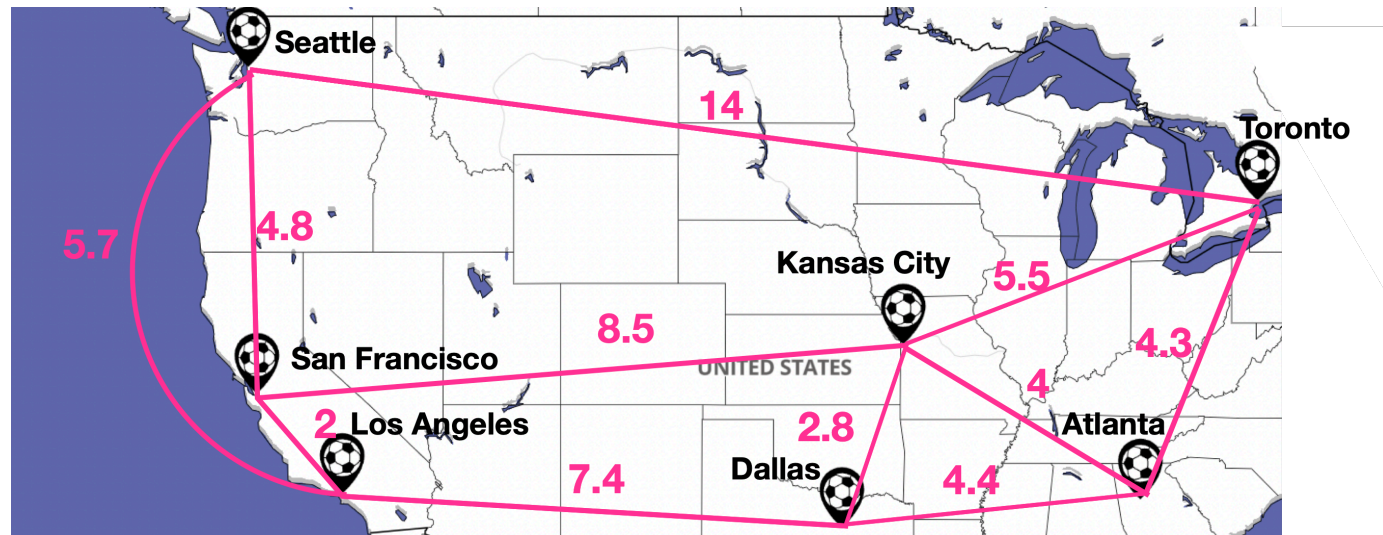

Task 1:

One fan wants to get from the Los Angeles stadium to the Toronto stadium, by travelling along the paths drawn on the map, in the shortest possible way.

The numbers shown on the map represent the real distances.

The shortest route measures less than 16.

Can you find this route? How long is it?

Challenge!

Another fan also wants to travel from Los Angeles to Toronto but wants to visit every other stadium on this map on their way. What is the shortest route they can take?

Note: The numbers represent the distances between the cities, as the crow flies. But one of the paths has been drawn as a curve rather than a straight line just to make the diagram clearer.
